Chemical Compatibility	201 - 202
Specifications	203

POLYESTER AND VINYL ESTER MATERIALS

Polyester and vinyl ester channels are manufactured from the pultrusion process and are color coded gray and beige respectively. Components are made by reinforcing a polymer resin (polyester or vinyl ester) with multiple strands of glass filament, alternating layers of glass mat and U.V. resistant surfacing veils. The glass is drawn through the liquid resin, which coats and saturates the fibers. The combination of resin, glass and veil is then continuously guided and pulled (pultruded) through a heated die that determines the shape of the component.

In the die, the resin is cured to form a reinforced part which can be cut to length. The hardened fiberglass pultrusion is reinforced with an internal arrangement of permanently bonded continuous glass fibers to increase its strength.

INSTALLATION

Fabrication requires just three simple operations: cutting, drilling and sealing as described below.

Cutting – Hand held saws, such as hack saws (24 to 32 teeth per inch) are suitable when a few cuts are required. For frequent cutting, a circular power saw with a carbide-tipped masonry blade yields the best results. When using a power saw, dust filter masks, gloves and long sleeve clothing should be worn.

Drilling – Any standard twist bit, even when used with battery-powered drills will work well. Carbide-tipped drill bits are recommended.

Sealing – To protect against future migration of corrosive elements into the cut sections, all cuts and holes should be properly sealed with clear urethane sealer.

OPERATING ENVIRONMENT

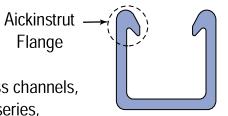

Temperature Ranges – Fiberglass parts are supplied in five different materials covering distinct temperature ranges. The temperature ranges indicated are meant to be used only as a general guideline. Continual exposure to elevated temperatures reduces the strength properties of plastics and glass-reinforced fiberglass. Actual resin test data confirms that a 50% reduction in strength occurs at the extreme high temperature levels.

Chemical Resistance – See the chart on page 204-205 for corrosion resistance. The results are based upon immersion for a 24 hour period. This is typically the "worst case" exposure to corrosion. Less severe contact such as spills, splashes and vapor condensate will exceed the performance results listed in the table.

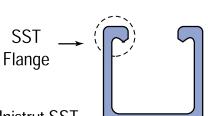

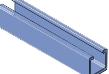

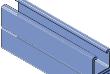

Loading – Channel loading is defined with description of each type of channel. Additional loading and design limitations for fittings and accessories are described in the appropriate section for that part.

Material Temperature Ratings		
Material Code	Low Temp.	High Temp.
E - (Rigid PVC)	-25°F (-31°C)	130°F (54°C)
P - (Poly/Glass)	-35°F (-37°C)	200°F (93°C)
V - (Vinyl/Glass)	-35°F (-37°C)	200°F (93°C)
PU - (Poly)	-40°F (-40°C)	140°F (60°C)
N - (Nylon)	-20°F (-29°C)	150°F (66°C)

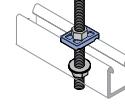

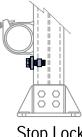

Channel - Aickinstrut Flange Profile

 <p>Aickinstrut Flange Unistrut fiberglass channels, except the SST series, incorporate the Aickinstrut flange design which provides reliable fastening and interlocking of components and accessories. It is important to note that standard metal framing components such as pipe clamps and strut nuts will not work with the flange design.</p>	Heavy Duty Aickinstrut Flange Profile $1\frac{5}{8}'' \times 1\frac{5}{8}''$  20P/V-2000-Pg 190	Light Duty Aickinstrut Flange Profile $1\frac{1}{2}'' \times 1\frac{1}{8}''$  20P/V-1000-Pg 191	 20P/V-2100-Pg 190	 20P/V-1100-Pg 191	 20P/V-2200-Pg 190	 20P/V-1200-Pg 191	 20P/V-2300-Pg 190	 20P/V-1300-Pg 191
--	--	--	---	---	--	--	--	--

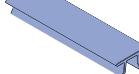

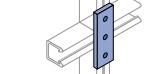

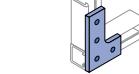

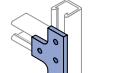

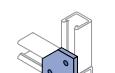

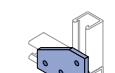

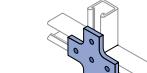

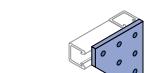

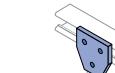

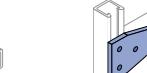

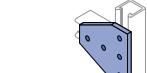

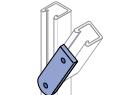

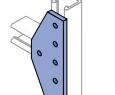

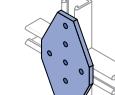

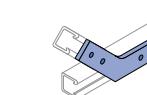

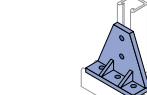

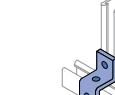

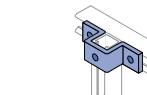

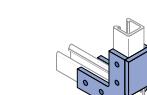

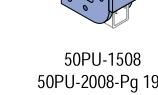

Channel - SST Profile

 <p>SST Flange The Unistrut SST profile is similar to the profile of standard metal channel. The Unistrut SST profile will accommodate standard $1\frac{5}{8}''$ metal channel fittings and components. This profile is available in polyester or vinyl ester resin. The Unistrut SST profile is not compatible with the fiberglass pipe clamps and channel nuts shown in this section. Typically, stainless steel clamps and strut nuts (listed elsewhere in this catalog) are used with this profile.</p>	Heavy Duty SST Profile $1\frac{5}{8}'' \times 1\frac{5}{8}''$  20P/V-2000 SST-Pg 192	 20P/V-2100 SST-Pg 192	 20P/V-2200 SST-Pg 192	 20P/V-2300 SST-Pg 192

STANDARD DUTY CHANNEL NUTS

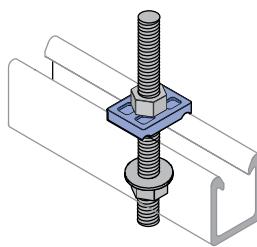

- Standard Duty channel nuts are designed for light duty applications that do not require high thread shear values. They can be used with both light duty series 1000 and heavy duty series 2000 fiberglass channel.
- Not for use with SST profile channel.
- Material: glass-reinforced polyurethane.

Part Number	Size	Thread Shear Lbs (kN)*	Torque Ft/Lbs (N·m)	Wt/100 pcs Lbs (kg)

		1.4
200-4342	$\frac{3}{4}$	2.5
		1.1

STOP-LOCK ASSEMBLIES

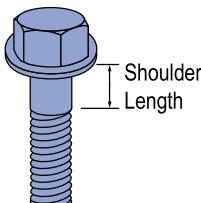

- Stop-Lock Assemblies reduce the chance of pipe slippage when running supports vertically and are recommended for applications that are subject to vibration, have regular contact with fluids or are vertically mounted. The Stop-Locks fit both sizes of channel.
- Material: glass-reinforced polyurethane.

Part Number	Size (in.)	Force Resistance Lbs (kN)*	Torque Ft/Lbs (N·m)	Wt/100 pcs Lbs (kg)
200-4227	$\frac{3}{8}$ "	200	7	6.3

		1.1	20	5.0

* Force resistance values shown represents a 3:1 safety factor.

** Supplied with a heavy duty channel nut for use only with the heavy duty series 2000 channel.

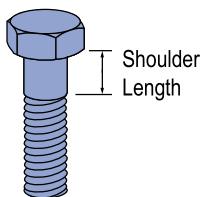

HEX FLANGE BOLTS

- Fiberfast bolts are ideal for mechanical connections that require a high degree of corrosion resistance. The $\frac{5}{8}$ " diameter fasteners are recommended for all channel fitting mechanical connections.
- Material: glass-reinforced polyurethane.

*Thread shear values shown represent a 3:1 safety factor.

50PU-500SP

- Channel spacers are designed to prevent wall compression under heavy loading conditions. Such loading occurs during the torquing of hardware for channel fittings.
- The spacers are designed to be used only with 1 1/8" channels and will accommodate $\frac{3}{8}$ " and $\frac{1}{2}$ " bolts.
- Material: molded from polyurethane

Wt/100 pcs: 2.0 Lbs (.91 kg)

THREADED ROD

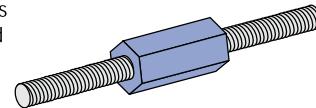

Material: pultruded vinyl ester resin
and is gray in color.

* Thread shear values shown represent a 3:1 safety factor.

** Standard lengths are 4' and 8'. The part number shown is for 4' lengths. To order eight foot lengths, add suffix ".96" to part number
(Example: F200-3827-96)

A-KONNECTOR ROD COUPLERS

A-Konnectors provide an excellent means for extending FRP all-thread rods beyond their standard lengths. A-Konnectors are manufactured from glass-reinforced polyurethane and are colored gray. A-Konnectors are packaged in bags containing 25 pieces.

Part Number	Size (in.)	Length In (mm)	Thread Shear Lbs (kN)*	Wt/100 pcs Lbs (kg)

* Thread shear values shown represent a 3:1 safety factor.

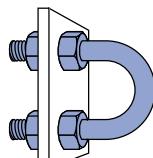

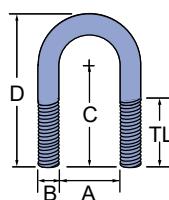

AIC-EC – CHANNEL END CAP

- Material: red PVC and designed for 1 1/8" channel.
- End caps are desired when the ends of the channel need to be enclosed. The cap easily installs by pressing it onto the end of the channel opening.

Wt/100 pcs: 3.4 Lbs (1.5 kg)

NONMETALLIC U-BOLTS

Note: Plate not included.

- Unistrut Nonmetallic U-Bolts provide a corrosion resistant alternative to traditional metallic U-Bolts. They have oversized diameters which allow them to hold steel conduit and plastic pipe. These bolts will outlast stainless steel in most corrosive applications.
- Each U-Bolt comes with two polyurethane hex nuts. Additional nuts and washers can be purchased separately.
- Material: glass-reinforced polyurethane

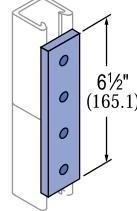

CHANNEL FITTINGS

- Channel Fittings are required to fabricate structures and are easily attached to Channels with channel nuts and polyurethane fasteners. The fittings are offered in two types; fabricated (cut from flat stock) or molded.
- Material (Fabricated Fittings): Either polyester (P Series) or vinyl ester (V Series) material.
- Material (Molded Fittings): All molded fittings with the exception of the post bases are molded in polyurethane.

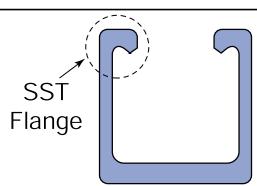

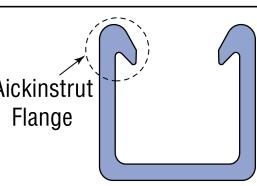

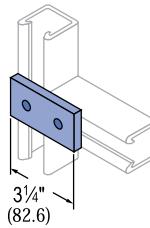

Note: The drawings for all fittings are shown with the Aickinstrut flange profile, however they can be used with either channel profile. All fittings are provided with 13/32" holes which accommodate 3/8" hardware. However several of the molded fittings are 1/4" thick and come with 9/16" holes which accommodate 1/2" hardware.

ADJUSTABLE PIPE CLAMPS

- Unistrut Adjustable Pipe Clamps are manufactured from glass-reinforced polyurethane and are adjustable to accommodate a wide range of outside diameters. They can be utilized with a variety of piping systems including: PVC, fiberglass, copper, rigid steel conduit and PVC coated rigid steel conduit.
- Care should be taken not to exceed 3 ft./lbs. of torque on the adjustable pipe straps.

Part Number	O.D. Pipe Size (in.)	Design Load		Torque Ft/Lbs (N·m)	Wt/100 pcs Lbs (kg)

*Design loads shown represent a 3:1 safety factor.

Rigid Pipe Clamps resemble the more traditional style of pipe clamps and are sized based on the pipe inside diameter or nominal size.

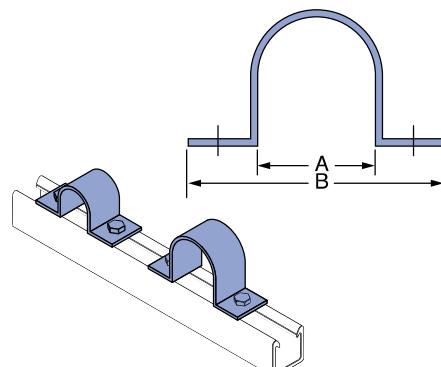

Polyurethane clamps are recommended for applications up to 160°F. For high temperature applications (up to 230°F).

Care should be taken not to exceed the recommended torque values of the rigid pipe clamps.

Material: glass-reinforced polyurethane.

- Two Hole Pipe Straps are designed for use in securing pipe, conduit and ducts to Channel. Two hole fiberglass straps can also be used independently from the channel for surface mounting. All sizes of the straps are suitable for load bearing applications.
- Material: fire-retardant, glass-reinforced polyester resin.
- For extreme chemical environments, the straps can be manufactured from vinyl ester resin. Larger diameter straps for special applications are also available. Contact the factory for pricing and availability of vinyl ester and large diameter straps. Two hole pipe straps should not be torqued above recommended values.

Notes:

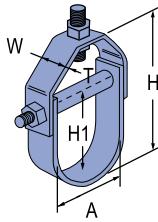

- (1) Bolts and channel nuts are sold separately.
- (2) When bolting onto 1 5/8" channel a 1 1/4" long bolt is req'd.

200-4101**UNISERT CHANNEL INSERT**

- Unisert is a polyurethane nonmetallic insert which can be used with standard cable ties for securing tubing, conduit and cables to standard metal channels.
- The Unisert works with all 1 1/8" channels that are 1 1/16" deep or more. One size fits 12, 14 and 16 metal gauge channels.

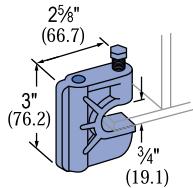

Note: For use only with metallic channel.

POWER-RACK STANCHIONS

The Power-Rack Stanchion is made entirely from glass-reinforced nylon, these stanchions offer greater corrosion resistance than classical metal stanchions. The interlocking design allows the arm to "lock" into nine different levels on the 14 1/4" stanchions and fourteen on the 17 1/2" stanchion. Glass-reinforced polyurethane stanchions are available as a special order. Contact Unistrut for pricing and availability.

Dimensions – The stanchion back has $\frac{1}{16}$ " x $\frac{1}{16}$ " holes to accept fasteners for mounting. There are two mounting holes in the 21 1/8" long stanchion and three in the 33 1/8" long stanchion. Thickness at the slotted mounting holes is 1 1/8". The mounting holes are spaced on 12" centers and require 1/2" diameter fasteners.

Installation – The Stanchions can be anchored into existing concrete structures using any industrial anchoring system. For new concrete structures, the Stanchions can be mounted to fiberglass concrete embedment channel and attached with 1/2" channel nuts and 1/2"x 3" Fiberfast Bolts.

Fire Retardance – Power-Rack materials meet or exceed the requirements of UL94 HB.

Loading – The recommended allowable loads on Power-Rack Stanchions vary depending upon the position of the arm. Use these guidelines for a safe, reliable installation:

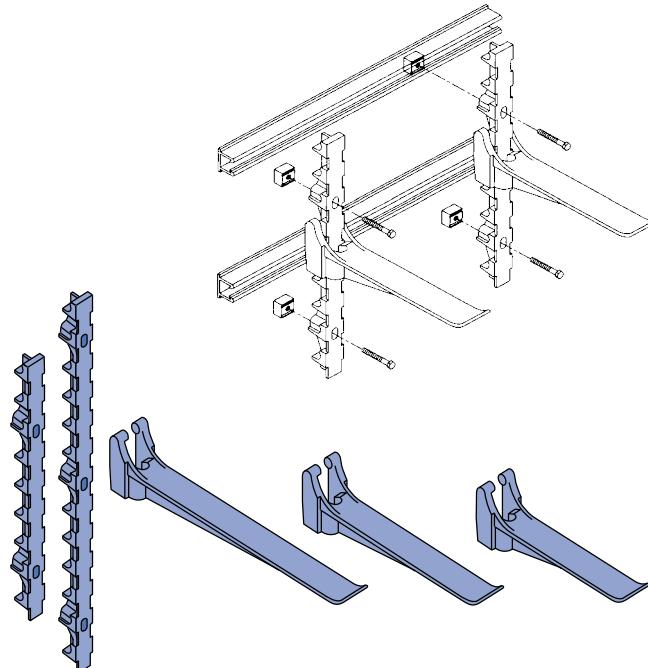

- Total load on any one arm should not exceed 800 lbs.
- The sum of the loads on an arm multiplied by their distances to the wall stanchion should not exceed 1200 in./lbs.

Example: A cable weighing 200 lbs. is positioned on an arm at a distance of 5" from the wall stanchion.

If the total load is less than 800 lbs and the sum of the load multiplied by their distances to the wall stanchion does not exceed 1200 in./lbs., then the system is adequate. In this case,

Total load (200<800 lbs) = OK

Tot. moment (200x5 in. = 1000<1200 in./lbs.) = OK

Part No.	Description	Size In (mm)	Wt/100 pcs Lbs (kg)	Load (lbs.)* Lbs (kN)

FIBERGLASS CLAMPS DESIGN LOAD INFORMATION

There are two types of piping system loadings:

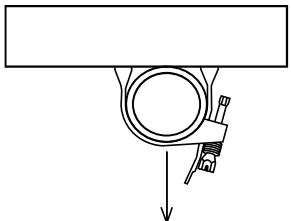

- overhead (Type 1) and
- vertical (Type 2)

as described below.

All pipe straps and clamps show the recommended loading for both types of loading.

Type 1 Overhead Design Load

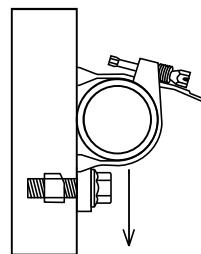

The design load shown represents pipes supported below the strut. The design loads shown are based on a minimum ultimate failure safety factor of 3:1.

Type 2 Vertical Design Load

The design loading shown can be achieved with the addition of a vertical stop lock assembly (Part #F200-4219) installed directly beneath the pipe clamp. The adjacent illustration shows how the vertical stop lock assembly provides additional support for pipe and how it can be used to achieve full Type 2 design loads.

Design loads are based on a minimum clamp slip safety factor or 3:1. It is recommended that stop lock assemblies be used for all vertical pipe support applications.

FIBERGLASS SPECIFICATIONS

1.0 SCOPE

- 1.1 This specification covers the requirements for the Unistrut Nonmetallic Channel Framing System.

2.0 MATERIAL

- 2.1 FRP channel shall be of pultruded glass-reinforced polyester or vinyl ester resin having the physical property values listed in this catalog.
- 2.2 Some accessories shall be of injection molded, 40% long glass fiber reinforced polyurethane, or nylon.

3.0 COMPOSITION

- 3.1 Glass-reinforced channel shall have a synthetic surfacing veil applied on exterior surfaces to improve weatherability and inhibit ultraviolet degradation. An ultraviolet stabilizer shall be incorporated in the resin formulation to further inhibit ultraviolet degradation.

4.0 STRUCTURAL DESIGN

- 4.1 Channel shall incorporate Unistrut's Aickinstrut flange profile design which allows full and positive interlocking contact of channel accessories and prohibits premature flange failure from torqued accessories.
- 4.2 Channel profile dimensions shall be:
 1 $\frac{5}{8}$ " x 1 $\frac{5}{8}$ " x $\frac{1}{4}$ " or
 1 $\frac{1}{2}$ " x 1 $\frac{1}{8}$ " x $\frac{1}{8}$ ".
- 4.3 All 1 $\frac{5}{8}$ " x 1 $\frac{5}{8}$ " channel profiles shall have a minimum pull out resistance of 1,000 pounds when load is applied over a $\frac{3}{8}$ " long section of the inside flanges.
- 4.4 Channel section lengths shall be supplied in 10' or 20' lengths ($\pm\frac{1}{8}$ ").
- 4.5 Universal Pipe Clamps shall have full interlocking contact with interior channel flanges to maximize pull-out resistance and be adjustable to accommodate a minimum $\frac{3}{4}$ " variance in piping or conduit O.D. sizes.

5.0 STANDARDS

- 5.1 Glass-reinforced channels covered in this specification shall have a flame spread rating of 25 or less when tested per ASTM E84 and meet the requirements of UL 94V0 thereby qualifying them as Class 1 material in the Uniform Building Code.
- 5.2 Glass-reinforced channels covered in this specification shall comply with the requirements of ASTM D 3917 and ASTM D 4385 which govern the dimensional tolerance and visual defects of pultruded shapes.

6.0 GENERAL

- 6.1 Unistrut nonmetallic Channel Framing shall be furnished as a system which includes all the necessary fasteners, channel splice plates, brackets, sealants, hangers, pipe clamps, etc.
- 6.2 Nonmetallic fasteners shall be manufactured from long glass fiber reinforced polyurethane to ensure maximum strength and corrosion resistance.
- 6.3 All components of the Unistrut Channel Framing System shall be nonmetallic except where type 316 stainless steel hardware is used as part of the assembly.
- 6.4 The manufacturer shall not have had less than 10 years experience in manufacturing strut systems.
- 6.5 All products are manufactured in the United States of America.
